

The **AOAC** granted Performance Tested MethodsSM status to EZ Gluten after trials at ELISA Technologies and an independent laboratory demonstrated that the method delivered consistent, accurate results that would allow food companies and consumers to screen their products for gluten at or above **10 parts per million (ppm)**.

The kit was initially validated in four matrices (rice flour, cooked dough, dog food and beer) to represent the array of products that can be tested. For more than 120 years, **AOAC** has been a proactive worldwide provider and facilitator in the development, use and harmonization of validated analytical methods and laboratory quality assurance programs and services.
